

**Table S2: Multivariate regression models predicting CXCR5+ T cell subsets based on HIV status and age**

	Coefficient (standard error)	p value
CXCR5+CCR7+ in CD4 T <sub>M</sub>	21.4 (3.4)	6.99E-09
CXCR5 in CD8 T <sub>M</sub>	11.3 (3.6)	0.002
PD-1+ in CXCR5+CCR7+ in CD4 T <sub>M</sub>	13.7 (4.5)	0.003
PD-1+ in CXCR5+ CD8 T <sub>M</sub>	37.7 (5.9)	4.17E-09

*In a multiple linear regression analysis using R programming, each CXCR5+ T cell subset was predicted by HIV status when including age as a covariate*
